

Desmond Tutu HIV Foundation (DTHF) Testimonial

SAP Business One for NGO's

“SAP is a great step forward for the DTHF. The system will enhance our grant administration and management reporting. SAP Business One will help improve project management and budget planning. In addition, the controls integral to the SAP system decrease risk and this should improve our system audits. The DTHF operates a wide variety of projects from six sites; our previous accounting system was inadequate. The change to SAP has been long overdue,” says *The DTHF's Chief Financial Officer, Ganief Abraham.*

Industry	NGO / Non-profit organisation
Employees	Fluctuating – Primarily volunteer based, users 19
SAP Solution	SAP Business One
Reasons for choosing SAP	Multiple systems hindered transparency and access to information, many affiliates already run SAP, integration
Key benefits	Track process of projects, increased fund management, access to real-time and accurate data, grant control, streamlined financial management, compliance to high standards of corporate governance and compliance
Customer quotes	<p>“With numerous programmes and projects running, some spanning years, we needed a versatile and robust business management system that could essentially bring everything together and provide a central, enterprise-wide platform for managing finances, monitoring the progress of projects, reporting and delivering access to information”</p> <p>“Because our projects are funded through sponsorships and donations, and run through partnerships with public health departments, we need to be able to track and report on where and how each rand is spent. So, the system had to have the capability to support our high standards of corporate governance and compliance requirements. A welcome side-effect of more streamlined financial management would be faster, less complicated and less costly audits”</p> <p>“We also like the fact that the system is tried and tested, and that we have access to qualified support”</p>
Previous System	Simply Accounting
